

CSPO Course outline

Module 1: Scrum Basic

- Understand the Scrum Flow, the core components of the Scrum framework, and the Scrum vocabulary
- Understand the principles/legs of empirical process control
- Understand the work culture Scrum creates

Module 2: Roles & Responsibilities

- Understand the scope of the Product Owner, ScrumMaster, and the team role in detail
- Understand why there is no project manager and no Agile product manager

Module 3: Product Vision

- Understand the importance of having the product vision as an overarching goal galvanizing the entire Scrum team
- Understand the desirable qualities of the vision and how it can be shaped
- Understand the importance of carrying out just enough prep work
- Understand the relationship between vision and product roadmap

Module 4: Estimating

- Understand the different estimation levels in Scrum
- Understand that the accuracy of an estimate is more important than the precision of the estimate
- Understand that estimates of size and duration can be done separately
- Understand the impact of pressuring team members to provide low estimates
- Understand the difference between estimating and committing

Module 5: Product Backlog

- Understand what the product backlog is and what it is not
- Understand product backlog grooming

Module 6: Prioritizing

- Understand the importance and benefits of prioritizing the product backlog
- Understand the implications of saying everything is mandatory

- Understand who should have input into prioritization decisions
- Understand that proper prioritization of a product backlog is based on multiple factors
- Understand and know how to apply formal approaches to prioritizing (i.e., beyond just 'gut feel' or intuition)
- Understand how much latitude to give a team in adjusting the sequence of work

Module 7: Release Management

- Understand the goals and how-tos of release planning
- Understand that planning is adaptive, iterative, and collaborative
- Understand why quality is frozen and the concept of technical debt
- Understand why software should be released early and frequently
- Understand and measure velocity
- Understand release burndown charts
- Understand how a release plan can help predict the future

Module 8: Sprints

- Understand the product owner's role in Scrum meetings and how the Product Owner and Team collaborate
- Understand why sprints are timeboxed and protected
- Understand the concept of sustainable pace
- Understand team commitment
