

DevOps Master

Implementing Continuous Delivery

- Implementing version control
- Automating deployment
- Establishing continuous integration
- Introducing test automation
- Managing data and data security (DevSecOps)
- Establishing continuous delivery
- Trunk-based development

Designing a DevOps Architecture

- Creating a loosely coupled architecture

Improving Product and Process

- Using customer feedback
- Visualizing flow and the value stream
- Working in small batch sizes
- Fostering team experimentation

Using Lean Management and Monitoring

- Implementing lightweight change approval processes
- Monitoring and checking system health
- Limiting work in progress (WIP)

Implementing Cultural Change

- Supporting a generative culture
- Becoming a learning organization

- Fostering collaboration
- Making work meaningful
- Promoting transformational leadership

Assessing Maturity

- Assessing maturity with the help of DevOps capability
- Visualizing progress in DevOps maturity
